

ABSTRACT OF THE DISCLOSURE

A method for accessing the Internet using an Internet TV is provided. In order for a server operating a portal site to provide an authentication number to the Internet TV, to thus automatically access the server, the method for accessing the Internet using an Internet TV in an Internet TV system including the Internet TV, in which a function of accessing the Internet and a function of receiving TV broadcast are combined with each other, and the server for operating the portal site for providing various information items (a portal server) to the Internet TV, the method includes the steps of transmitting a message for requesting the authentication of the use of information to the portal server, requesting the Internet TV to input an authentication number, transmitting the requested authentication number to the portal server, and checking the transmitted authentication number, to thus provide information to the Internet TV. The portal server provides the authentication number to each Internet TV. Accordingly, the portal server confirms the access authority of each Internet TV, to thus let the Internet TV automatically access the portal server without the user login.
